

Exhaustive Analysis of Indian Agriculture.

(Session 1)

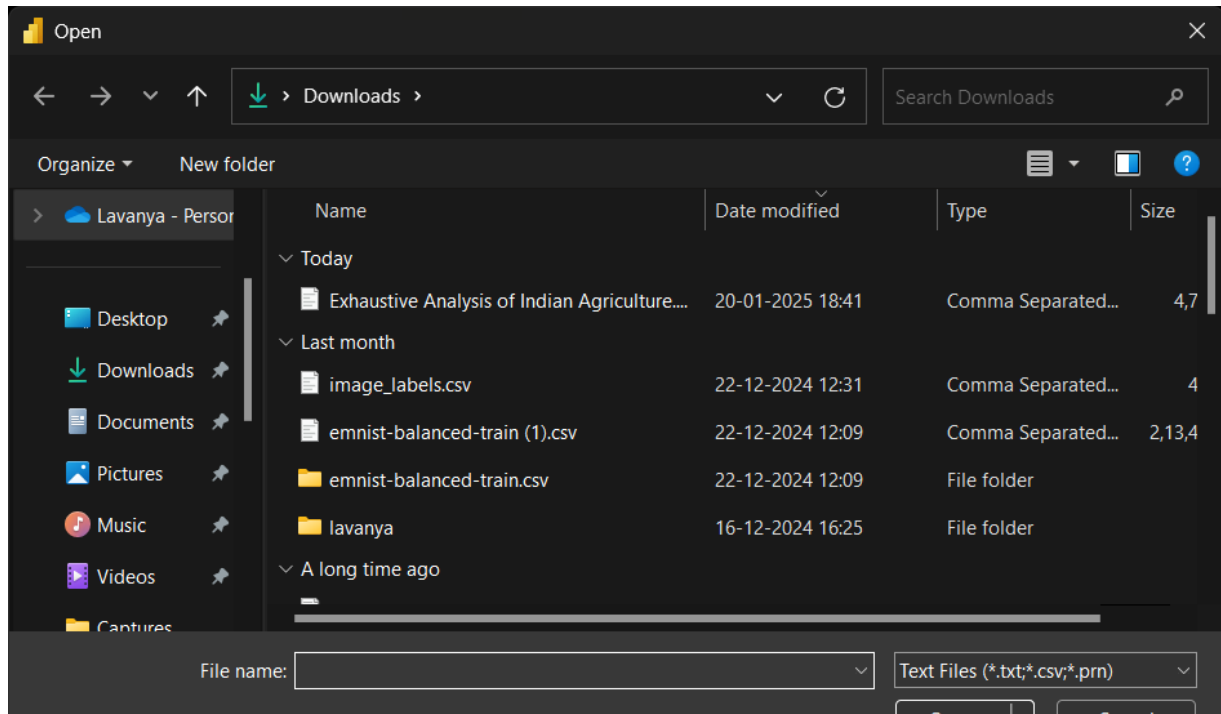

1.Open Microsoft Power BI --->Click Blank Report.

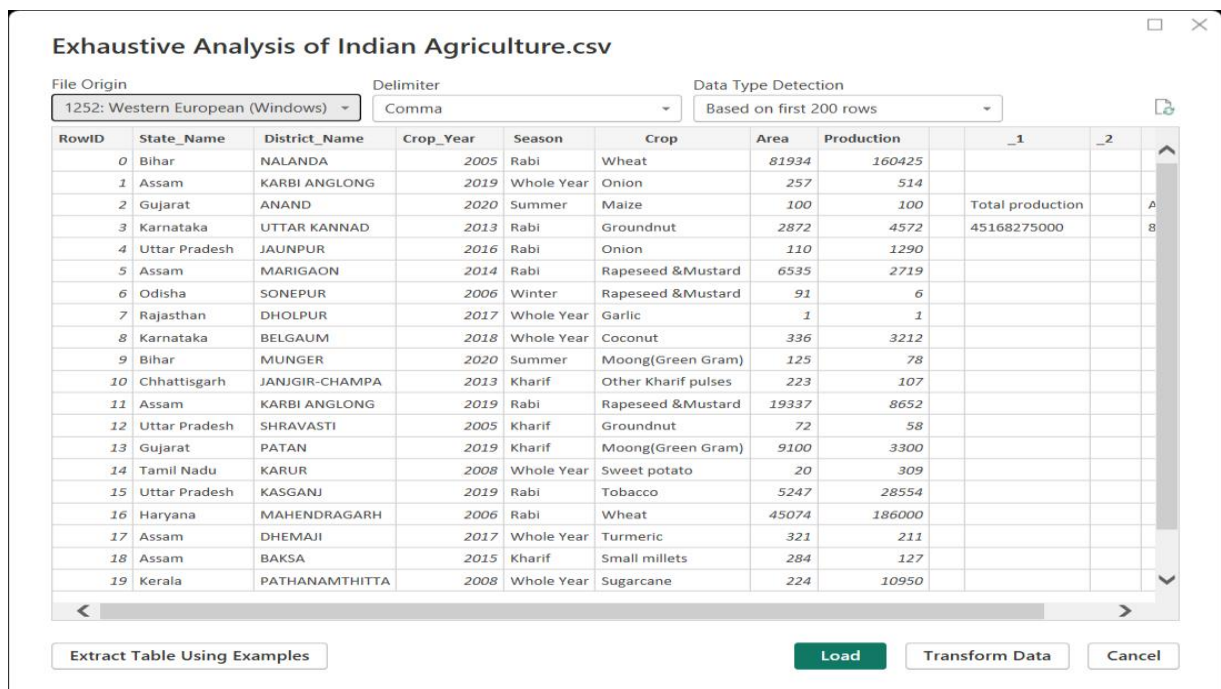

2.The Canvas appears with views in the left and visualizations in the right --->Click on Get Data and select text/csv.

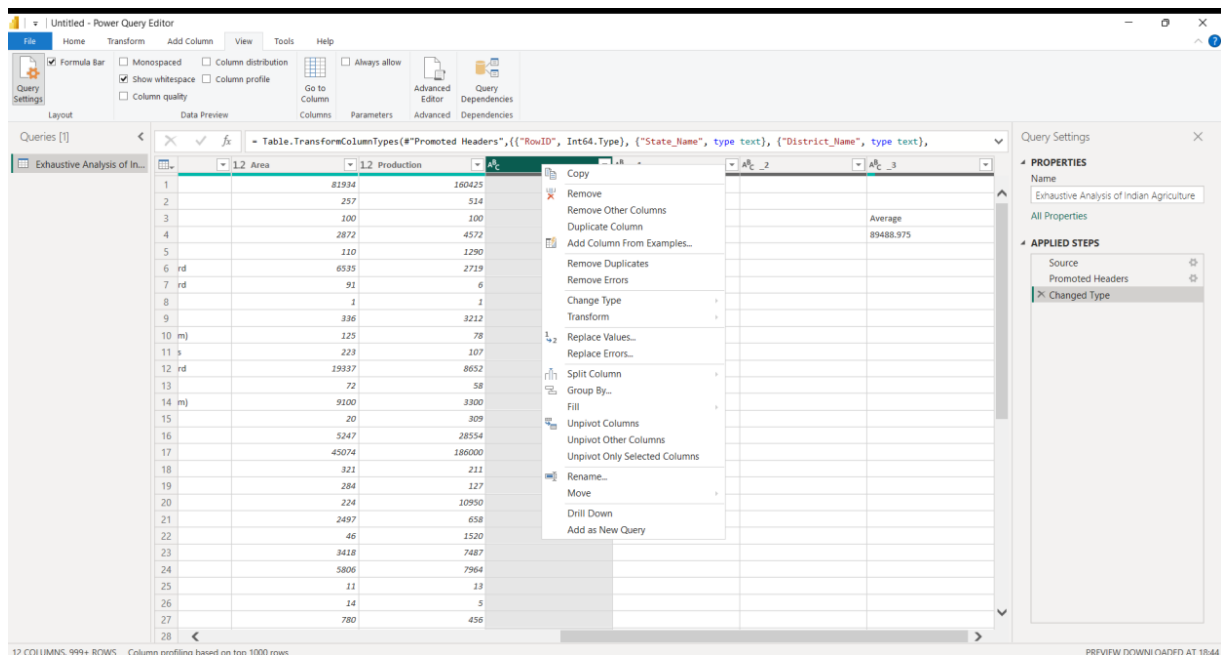

3. Choose the dataset to be loaded and transformed.

4. The loaded data appears with three options of load, transform data and cancel ---> Click on Load.

5. Select the transform data button in the home tab and click transform data ---> To delete the unwanted columns – Right click on the column header and select “Remove” ---> To retrieve the deleted column – Click the “x” symbol in the applied steps.

6. Open View tab and select “Column Quality” ----> A row appears below the column headers.
